THIS IS UNEVALUATED INFORMATION

The following tables reflect planned and actual tank car movements of liquid fuels from the major East German liquid fuel plants during July 1953. Plan figures represent the number of cars ordered; actual figures are those loaded at the plant. The figures relate only to tank car shipments for East German internal use. Shipments for SAG plants, for the Soviet Army in Germany, and for reparations and export deliveries are not included. The figures were from the Reichsbahn Kesselwagenleitstelle to DMK Kraftstoff und Mineraloel. For computing purposes, 16 metric tons is considered the average capacity of one tank car.
